KATA PENGANTAR

Stasiun Geofisika Manado, adalah salah satu dari enam UPT BMKG (Badan Meteorologi Klimatologi dan Geofisika) yang melakukan pengamatan variasi medan magnet bumi. Pengamatan ini mulai dilakukan pada tahun 1991 di Pos Pengamatan Magnet Bumi di kota Tondano, Kabupaten Minahasa Sulawesi Utara.

Pos pengamatan magnet bumi ini terdaftar pada *World Data Centre for Geomanetis (Edinburgh)* dengan nama stasiun TONDANO dan kode IAGA TND. Terdapat tiga peralatan yang dioperasikan yaitu Proton Processor Magnetometer (PPM) POS-1 dan Variometer DTU SPACE FGE K2 untuk variasi harian, sementara untuk pengamatan absolut menggunakan *Declination Inclination Magnetometer* (DIM) Bartington Wild T1.

Buletin magnet bumi diterbitkan sebagai rangkuman kegiatan pengamatan medan magnet bumi yang dilakukan sepanjang tahun 2021. Buletin ini berisi data pengukuran absolut, variasi harian dan bulanan dari medan magnet bumi, serta analisa bulanan A-indeks dan K-indeks yang mengindikasikan terjadinya gangguan terhadap medan magnet bumi.

Ucapan terima kasih disampaikan kepada semua pihak yang telah bersama-sama bekerja sampai buletin ini dapat diterbitkan.

Kami berharap buletin ini dapat berguna dan secara umum memberikan sumbangsih untuk kemajuan pengamatan magnet bumi di Indonesia.

Manado, Januari 2022

Kepala Stasiun Geofisika Manado,

Tony Agus Wijaya, S.Si.
NIP. 197608021998031001

DAFTAR ISTILAH

- Atmosfer : ruang di sekitar bumi yang batas bawahnya adalah permukaan bumi dan batas atasnya tidak tentu.
- Magnet bumi : merupakan medan magnet yang dihasilkan oleh bumi, dimana kutub Utara magnit bumi berada di kutub selatan geografis bumi dan kutub Selatan magnit bumi berada di kutub utara geografis bumi.
- Komponen X, Y dan Z : komponen pengukuran medan magnet bumi, dimana:
- $X = \text{medan magnet bumi komponen horizontal yang searah dengan arah utara geografis (berarah Timur-Barat geografis bumi).}$
- $X = H \cos D.$
- $Y = \text{medan magnet bumi komponen horizontal yang searah dengan arah timur geografis (berarah Utara-Selatan geografis bumi).}$
- $Y = H \sin D = X \tan D.$
- $Z = \text{medan magnet bumi komponen vertikal.}$
- $Z = F \sin I = H \tan I.$
- H : Resultan pengukuran medan magnet bumi dari komponen X dan Y .
- $H = \sqrt{x^2 + y^2}$, dan merupakan medan magnet bumi komponen horizontal
- D : sudut Deklinasi dari medan magnet bumi dengan formula
- $D = \arctan (Y/X).$
- I : sudut Inklinasi medan magnet bumi dengan formula
- $I = \arctan (Z/H).$
- F a : medan magnet bumi total
- $F = \sqrt{x^2 + y^2 + z^2},$
- nT : satuan besaran medan magnit bumi dengan satuan nano Tesla (nT).
- K-indeks : sebuah indeks lokal kuasi-logaritmik dalam periode 3 jam dari aktivitas magnetik bumi
- A-indeks : nilai maksimum yang terjadi dalam rentang waktu 24 jam, dimana diperoleh dengan menghitung rata2 dari 8 titik amplitude (a-indeks)
- a-indeks : konversi linier dari K-indeks dalam periode 3 jam

I. PENDAHULUAN

A. Medan Magnet Bumi

Bumi memiliki medan magnetik yang menyelubungi bumi dan membentuk lapisan pelindung. Lapisan ini dinamakan Magnetosfer. Magnetosfer berfungsi untuk melindungi bumi dari partikel dari matahari yang berbahaya karena memiliki energi tinggi dan berguna untuk melindungi atmosfer agar tidak terganggu oleh angin matahari. Medan magnetik yang terukur di bumi disebut medan magnet bumi (medan geomagnetik). Medan geomagnetik merupakan superposisi medan magnet yang berasal dari medan magnet utama, medan magnet eksternal dan medan magnet anomali. Medan geomagnet di setiap titik permukaan bumi berbentuk vektor, yaitu memiliki arah dan besaran. Komponen-komponen vektor pada medan geomagnet yaitu komponen X, Y, Z, H, F, I, D.

Intensitas medan magnet bumi yang terukur di suatu titik mengalami perubahan secara signifikan terhadap waktu. Waktu perubahan intensitas medan magnet dapat terjadi dalam hitungan detik hingga jutaan tahun, secara periodik maupun acak. Variasi terhadap waktu ini dapat dikategorikan menjadi variasi jangka panjang atau variasi jangka pendek. Variasi jangka panjang (*secular variation*) memiliki rentang waktu 5 tahun atau lebih, perubahan ini disebabkan karena variasi medan magnet utama bumi akibat perubahan posisi kutub magnet. Sedangkan variasi harian disebabkan akibat variasi medan magnet luar yang dipengaruhi oleh radiasi matahari. Selain kedua variasi tersebut, medan magnet bumi juga dapat berubah sementara akibat adanya badai magnetik.

B. Stasiun Magnet Bumi Tondano

Nama Stasiun : Stasiun Geofisika Manado

Nama observatorium : TONDANO

Kode Stasiun : TND

Alamat observatorium : Jl. Papakelan,
Kelurahan Kendis, Kecamatan Tondano Timur,
Kabupaten Minahasa, Provinsi Sulawesi Utara.

Lintang Geografis : 1.295 Lintang Utara / North

Bujur Geografis : 124,925 Bujur Timur / East

Ketinggian : 704 meter

Waktu lokal : UTC + 8

Peralatan :

Variometer - *DTU Space FGE K2*, untuk data HEZ
Resolusi digital : 0.1 nT
Sampling rate : 1 detik

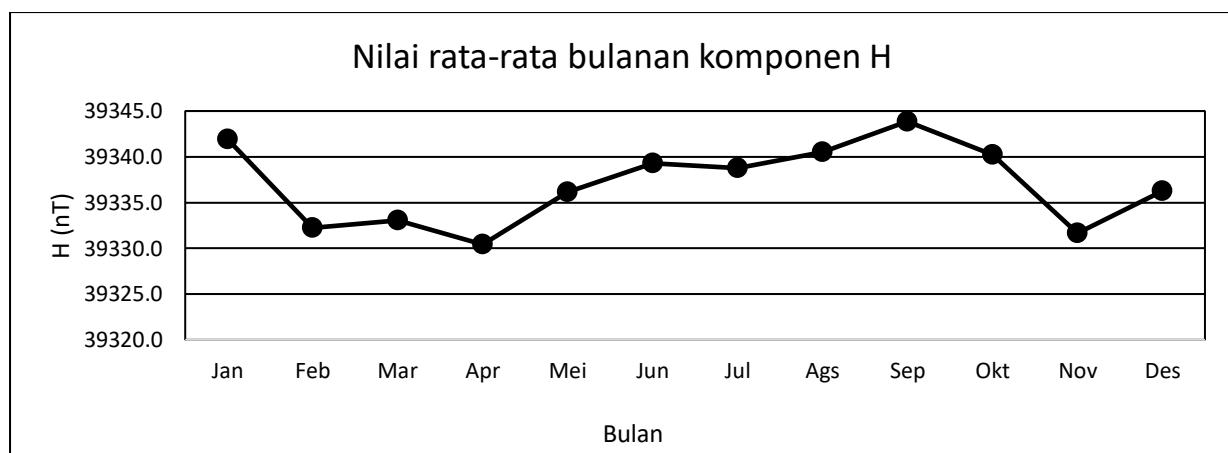

- *Quantum Magnetometry Laboratory* - POS-1 Proton
Precision Magnetometer (PPM)
Resolusi digital : 0.5 nT
Sampling rate : 10 detik
- Absolut:
- *Declination Inclination Magnetometer (DIM) Theodolite*
Bartington Wild K1
